

Dear FCC,

I feel that the 160-meter amateur band should be structured like the other HF bands and have specific frequencies for specific modes. This petition's request to limit narrow-band modes to the 1.800 to 1.843 MHz region appears reasonable to me and allows 78 per cent of the band to be used by wide-band modes. This petition would result in a minimal change to existing FCC regulations but would help alleviate any conflicts between those amateurs wishing to work weak-signal stations without being interfered with or causing interference to those stations using the band for more local communication. This action would simply bring the 160-meter band into accordance with the other HF bands. Please act favorably on this petition. Thank you.
